Engineer Electrical Engineer Civil Engineer   Engineers use their expertise in science and math to build or enhance Electrical engineers design, develop and maintain electrical control systems Civil Engineer   Technician Software Developer Hardware Engineer   Technician and functioning properly Software developers build and implement efficient programs and systems to serve Hardware engineers research, design, develop, and te computer hardware or   Industrial Designer Embedded Software Engineer Control Systems Engineer   Industrial designers create concepts and oversee the development of products Embedded software engineers develop custom software solutions for a range of Control Systems engineers design complex automated process control systems to
Engineers use their expertise in science and math to build or enhance   Electrical engineers design, develop and maintain electrical control systems   Civil engineers design and oversee large-scale construction projects that     Technician   Software Developer   Hardware Engineer     Technicians ensure complex systems are maintained and functioning properly   Software developers build and implement efficient programs and systems to serve   Hardware engineers research, design, develop, and te computer hardware or     Industrial Designer   Embedded Software Engineer Embedded software engineers develop custom software solutions for a range of   Control Systems engineers design complex automated process control systems to
build or enhance   electrical control systems   construction projects that     Technician   Software Developer   Hardware Engineer     Technicians ensure complex systems are maintained and functioning properly   Software developers build and implement efficient programs and systems to serve   Hardware engineers research, design, develop, and te computer hardware or     Industrial Designer   Embedded Software Engineer   Control Systems Engineer     Industrial designers create concepts and oversee the developer subtions for a range of   Embedded software engineers develop custom software solutions for a range of   Control systems to
Technicians ensure complex systems are maintained and functioning properly   Software developers build and implement efficient programs and systems to serve   Hardware engineers research, design, develop, and te computer hardware or     Industrial Designer   Embedded Software Engineer   Control Systems Engineer     Industrial designers create concepts and oversee the development of products   Embedded software engineers develop custom software solutions for a range of   Control Systems engineers design complex automated process control systems to
and functioning properly   programs and systems to serve   computer hardware or     Industrial Designer   Embedded Software Engineer   Control Systems Engineer     Industrial designers create concepts and oversee the development of products   Embedded software engineers develop custom software solutions for a range of   Control systems engineers design complex automated process control systems to
Industrial designers create concepts and oversee the Embedded software engineers develop custom development of products Control systems engineers design complex automated software solutions for a range of
development of products software solutions for a range of process control systems to
Chemical Process Engineer Telecommunications Engineering Technology Manager
Chemical process engineers develop the systems and processes for transforming Telecommunications engineering specialists design and maintain voice, video and Technology managers oversee the installation and operation of technology
Product Development Engineer Avionics and Flight Engineer
Product development engineers design, develop and Avionics and flight engineers monitor and maintain test new products, including airplanes to ensure all

Have you spent hours, days, or even weeks scrolling through hundreds of job listings trying to identify the "perfect job title" that fits your interests? You're not alone. One of the biggest challenges job seekers have is knowing what types of jobs to search for in their job search, or even which jobs exist.

LinkedIn heard you and as a result launched new job pages designed with the job seeker in mind. Now, job seekers and students unfamiliar with the professional landscape can browse job titles within various job functions (e.g. <u>engineering jobs</u>, <u>human resources jobs</u>, or <u>Education</u> <u>Jobs</u>). LinkedIn surfaces popular job titles and listings, as well as top cities and companies for a particular job, making it easier for job seekers and exploring students to learn more about opportunities in various fields.
